

Easy to deploy and easy to modify data reduction pipelines using KERN and CWL

packaging, containerization and pipelines

ADASS 2019 - Groningen

Gijs Molenaar

Pythonic.nl

Who am I

- pythonic.nl
- 8 years
- Research / Software Engineer
- Machine learning
- Contractor in science and industry
- Part-time remote PhD student South Africa

What did I work on?

- Large scale distributed pipeline deployment
- Packaging / improving radio astronomy software
- Transient Pipeline (TraP)

The problem

- SKA is coming
- Data volumes too high to transport data
- Processing on the spot
- Opinionated data processing

But is it a problem?

- Why not let scientist process data on the spot
- Give them control over the data reduction
- Let them deliver a pipeline

What is required

- A technical solution
- Acceptation
- Procedures

What is required

- A technical solution
- Acceptation
- Procedures

Scientific Software

- Often hard to install
- Locally and on cluster
- Issues like
 - Broken software
 - Compilation
 - Dependencies (versions)
- Python 2 / 3

We want to

- Centralize agony
- Only compile once
- Compatible tools
- Make sure deployment are uniform between platforms

Solution?

docker

Solution

Containers

- Often leads to massive containers
- What is inside?
- How to combine containers?

Package management

- A boring old solution
- But does the job well
- Can be installed inside and outside container

KERN

- Made for SKA South Africa
- Radio astronomy software packages
- basics, Imaging, pulsar
- A superset of Ubuntu LTS
- 75 packages and growing
- New release every +/- 6 months

Installation on Ubuntu 18.04

```
$ sudo apt-add-repository -s ppa:kernsuite/kern-5  
$ sudo apt-get update  
$ sudo apt-get install wsclean
```

More than packaging

- A platform for radio astron software improvement
- A community (reporting and fixing bugs)
- Upstream bug fixes
- Python-casacore binary wheel
- Presto python3

Debian

- Collaboration with Debian Astro blend
- Many KERN packages are now in Debian
- Ole Streicher is also here

No KERN-6?

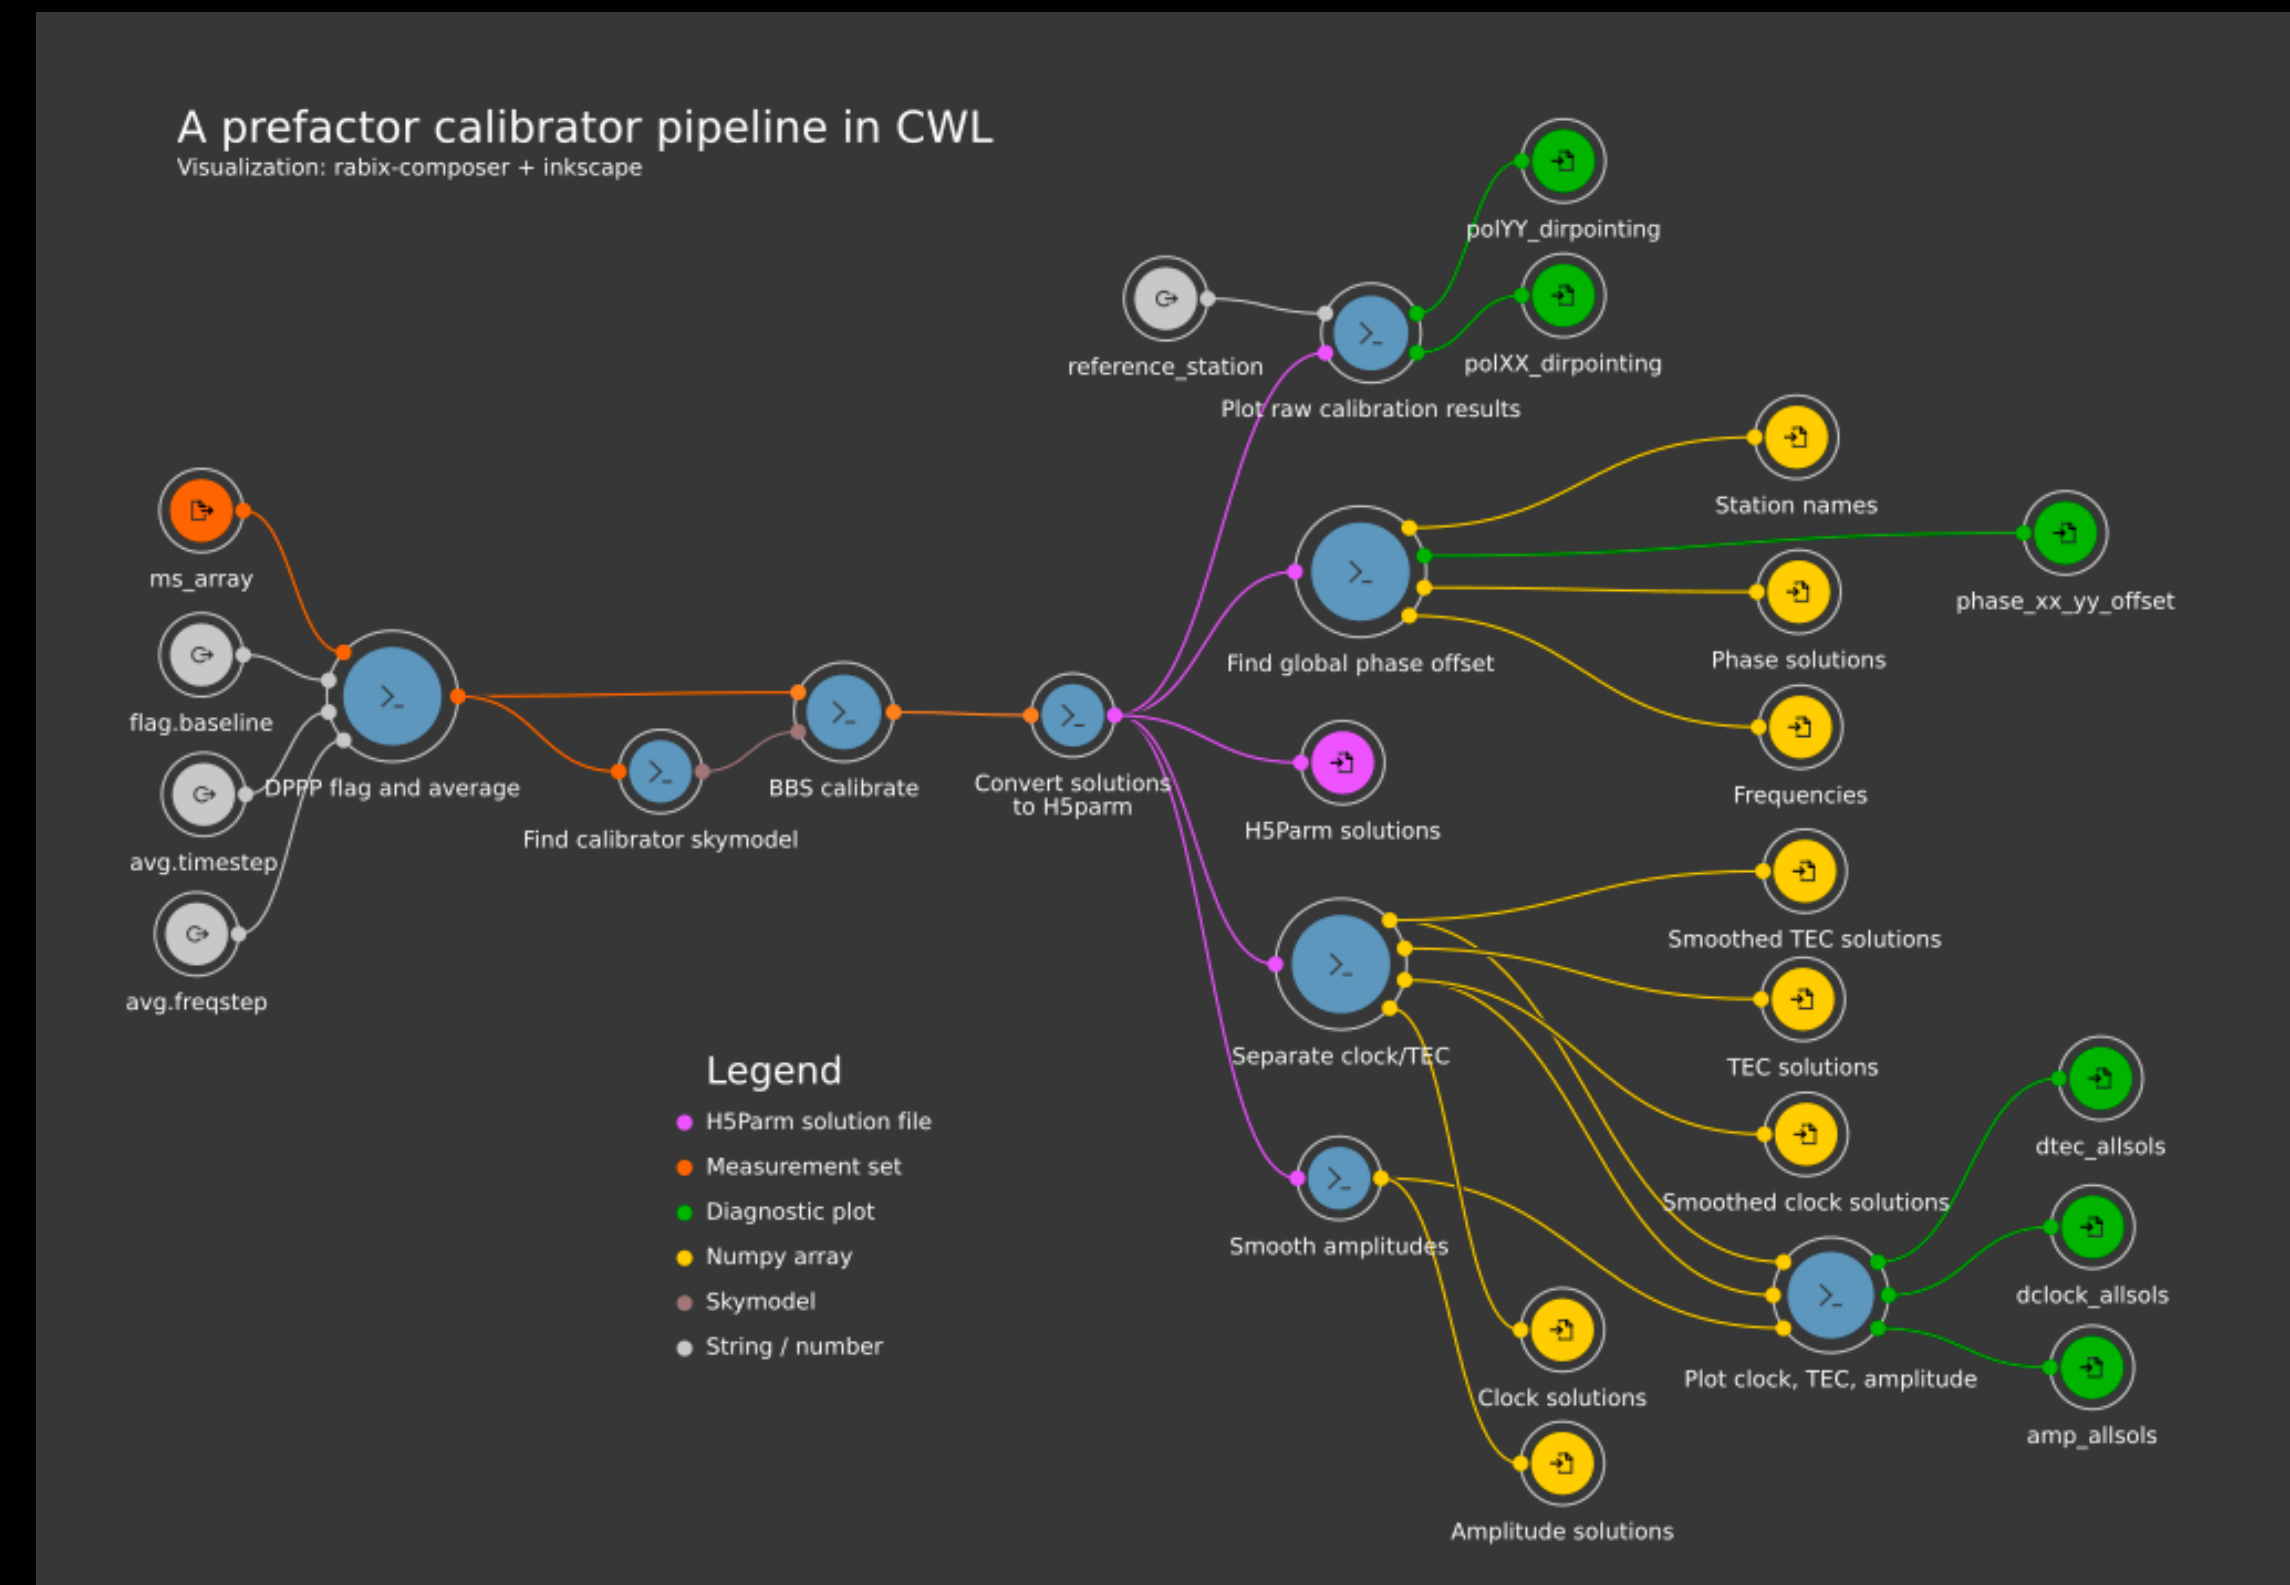

- No funding!
- If you use KERN and find it useful
- Please consider helping me find funding :)

CWL

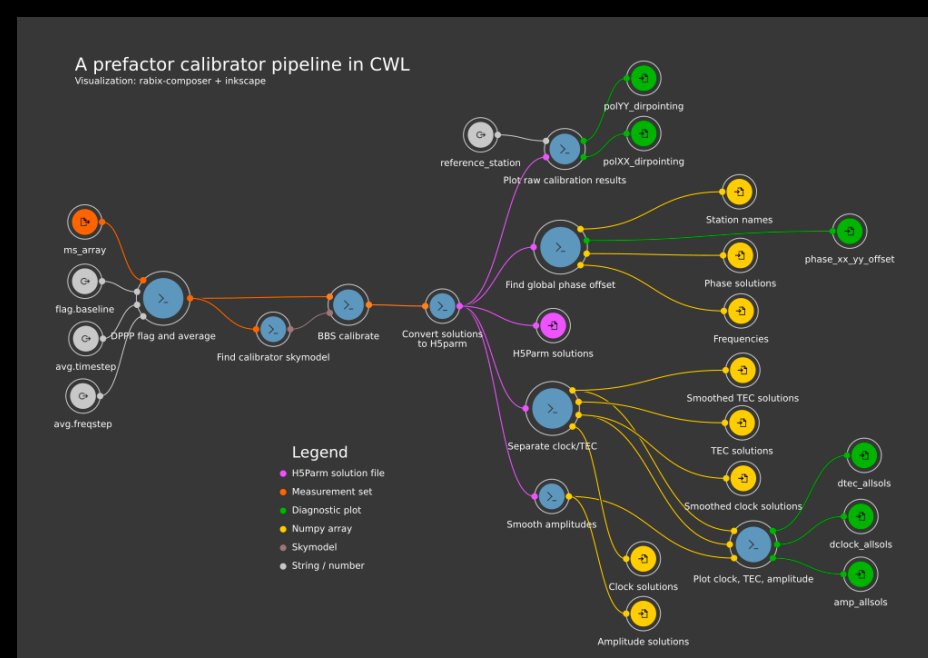

- Common Workflow Language
- The HTML of pipelines
- Method for describing your pipeline
- And how all components interact

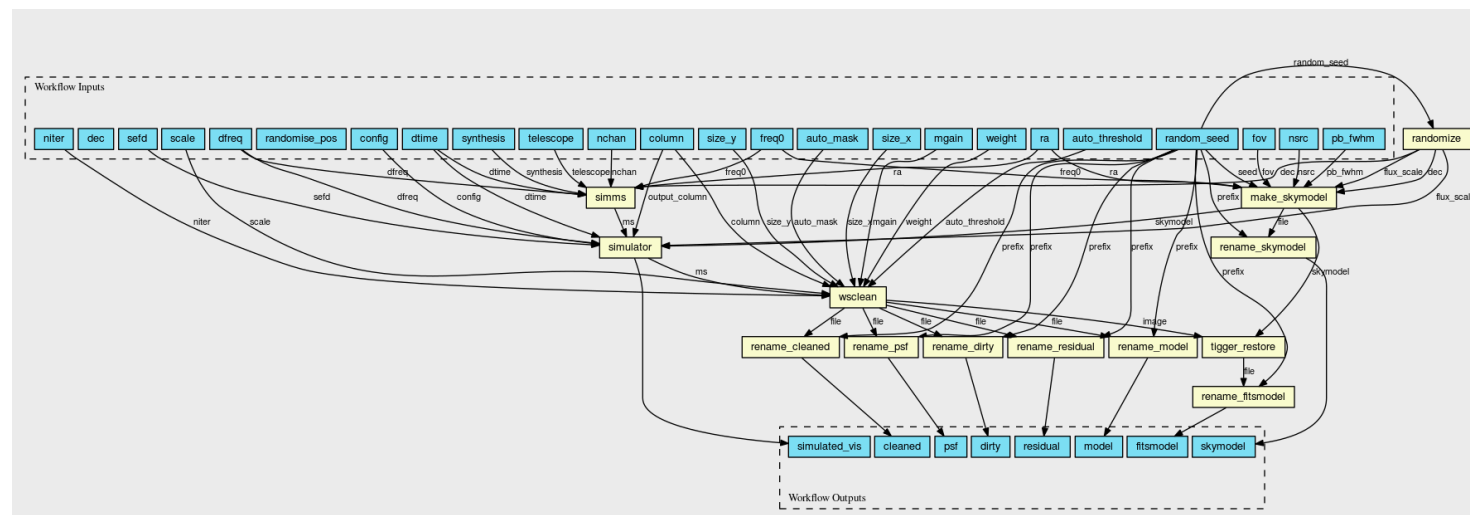

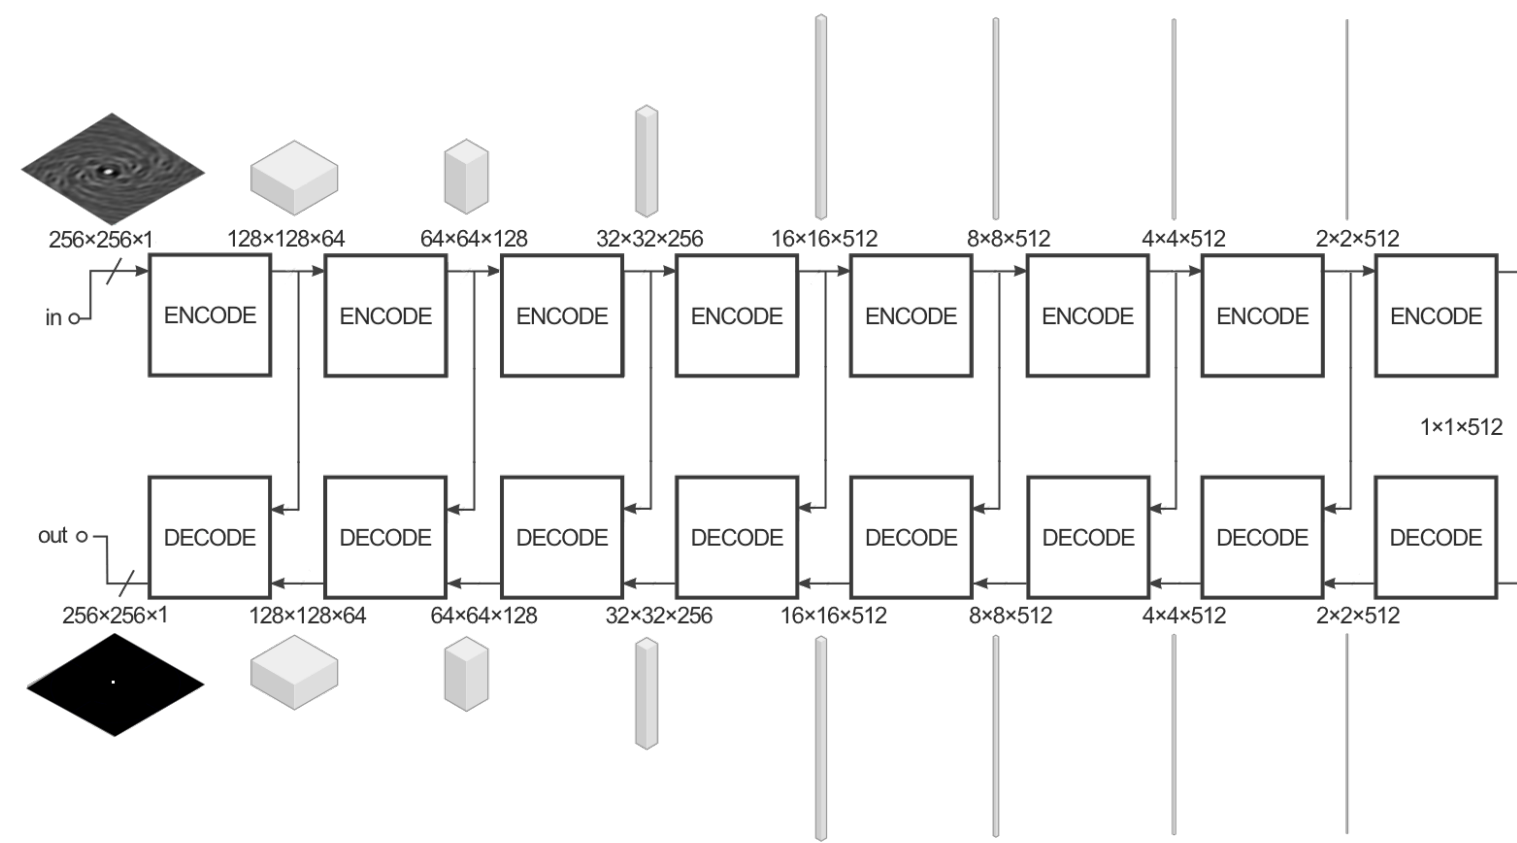

Prefactor

EOSCpilot 4lofar pilot

Want to know more?

- Blog post with full story
- <http://bit.do/radiopipelines>

In short

- I Believe astronomers can reduce their own data
- Temporarily hand over control of the data processing hardware
- Composable pipelines using packaging, containerization & CWL
- Remaining challenge: Organisational setup

bin	reshuffle package	last month
meerkathi	Merge pull request #611 from ska-sa/flagoptions	4 days ago
.gitignore	Fixes case where field order changes, adds optional dependencies	7 months ago
.gitmodules	Bunch of . files	8 months ago
.travis.yml	Bunch of . files	8 months ago
Dockerfile	don't call report modules when deps are not installed	5 months ago

github.com/ska-sa/meerkathi/network/alerts

Organisational setup

- Open source default pipeline
- Have the option to bundle a pipeline with your observation proposal
